

Jamboard

A collaborative, digital whiteboard built for the cloud

Jamboard takes the whiteboard to the cloud, delivering a collaborative experience designed to unlock your team's creativity, in real-time, from anywhere.

Better creation

Use creative drawing tools, like markers from the web, using Google Search and add images and content from Google Drive or your smartphone.

Better collaboration

Share the Jamboard with anyone, participate from your tablet or phone and work with multiple Jamboards within or beyond the walls of your company.

Better saving and sharing

All your work is saved in Google Drive and your Jam also makes that information so you can pick up right where you left off and your ideas are not shared easily.

Intuitive and easy to use

Making and making updates is easier than life in your phone or tablet, and the board will work with or without any keyboard or computer using a mouse.

Portable and quick setup

It's light, stable and on wheels with a single cable for power. Everything else is available to you, so you can sit or flip it around with pinning right away.

Uncompromising design

Custom designed to meet the highest standards of safety and engineering, low-voltage touch technology delivers a superior experience.
